The simplest, cheapest and safest IP sharing (pure software)

How to share the Internet connection with every computer in the easiest and cost-effective way? How to find the simplest, cheapest and safest way to allow every computer in the same network simultaneously share access to whatever type of Internet connection by only 1 modem, 1 telephone line and 1 account?

FNet Gateway delivers a complete Internet access management. It provides you with Internet Bandwidth Sharing, Bandwidth Combine, Gateway, DMZ (DeMilitarized Zone), DHCP Server, Firewall, Traffic Monitoring, Multi-Homing, Server Backup and Load Balance...etc. FNet Gateway turns any PC into a powerful Internet gateway with enterprise-level management features, while protecting the computers on your network. Complete software, easy to upgrade.

Unique Technology

- AUTO DMZ**
 Assign incoming Ports to each demanded virtual IP automatically. Fully support for MSN, Yahoo, on-line games, etc.
- NAT/UPnP**
 Support Symmetric-NAT, UPnP-NAT protocol and NAT / Transparent mode.
- Bandwidth**
 Aggregates bandwidth of all lines, which greatly increases the connecting speed (e.g. 512+512 = T1).
- Multi-Homing**
 Support multi ISP connections, Fnet Gateway will continue function, if either connection is failed.
- IP Stealth Technology**
 Integrated firewall with unique IP stealth technology to restrain hackers.
- FNet NiCone Tech**
 By using only one LAN card, Fnet Gateway can easily merge local area network with internet.

Package Checklist

- Fnet Gateway Installation CD.
 - User's Manual.
 - Serial Number and Registration Card.
- Check that your package is complete. If you find any item damaged or missing, please contact your retailer as soon as possible.

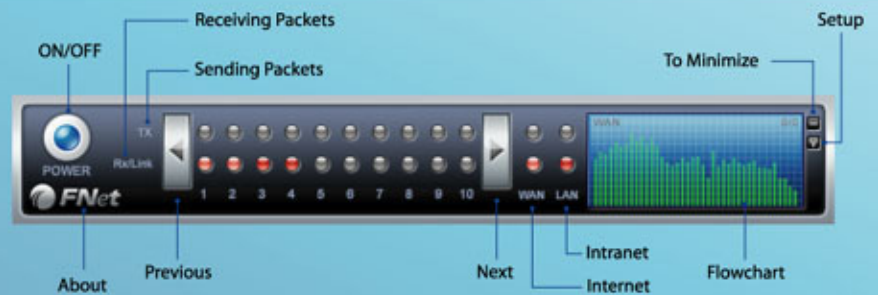

System Requirement

- Gateway Machine:**
 - 486-class processor or higher
 - At least one Network Interface Card can share broadband Internet connections.

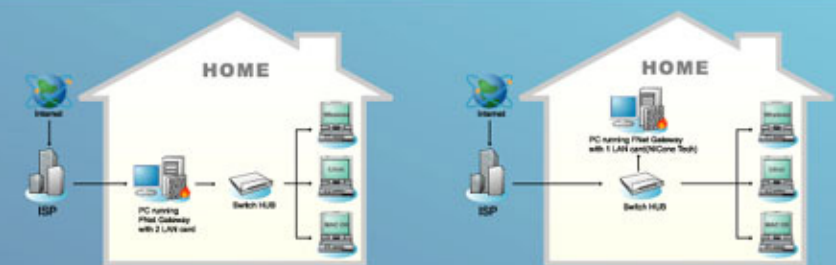

- Client Machine:**
 - Any TCP/IP client including DOS, Windows, BeOS, Mac, Unix or Linux-based systems....
